

TankSafe: Integrity inspections of your process line

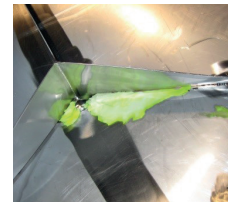

Bactoforce Tank Inspection

Cracks
Tensions in the construction or wear and tear.

Organic residues
Biofilm must be located and the root cause determined.

Defects and organic residues are a potential source of microbial problems in installations like tanks, vats, dryers, fluid beds, cyclones, etc.

Tank integrity testing includes inspection for:

- cracks, pores, pittings (in weldings and full surface)
- organic residues
- mechanical defects
- foreign objects

All reports are stored and made on-line available for easy access when needed.

Bactoforce inspection standards

Inspections are performed according to high standards by trained and qualified inspectors:

- Non-Destructive inspection
- ISO 9712, DIN EN 473
- Safety training (confined space and working at height)
- Experience in the food industry

Working with Bactoforce

In Bactoforce, we recognise that our job is to make you feel safe about the condition of your process line.

We take the responsibility for planning, coordination, safe execution, reporting and follow-up on the inspection activities.

Other inspection services include:

- Inspection of spraydryers and silotanks
- Heatexchanger integrity test
- Endoscopy

Bactoforce in brief:

- 20+ years of inspection experience in the food sector.
- Best practice inspection methods customised to food production facilities.
- Trusted partner to some of the leading brands in the industry in Europe.

Use Bactoforce to validate your equipment, prevent microbial problems and troubleshoot to find the source of a problem.
